## Section 1: Lectures

<b>1</b>	<b>Lecture 1: Operator and Superoperator Algebra</b>	<b>3</b>
1.1	Quantum States	4
1.2	Operators	6
1.3	Observables and Expectation Values	12
1.4	Time Evolution of Quantum States	14
1.5	Superkets and Superoperators	15
	Summary	17
	References	17
<b>2</b>	<b>Lecture 2: Spin</b>	<b>18</b>
2.1	The Orbital Angular Momentum of a Particle	18
2.2	Dirac Equation and the Electron Spin	21
2.3	Electron Spin Angular Momentum Operators	28
2.4	The Spin of Elementary Particles	30
2.5	The Nuclear Spin	31
2.6	Appendix: The Hamiltonian for a Particle in a Magnetic Field	32
	Summary	33
	References	34

<b>3</b>	<b>Lecture 3: The Quantum Description of An Isolated Spin-1/2</b>	<b>35</b>
3.1	The Quantum Description of an Isolated spin-1/2	36
3.2	Spin Angular Momentum Operators	40
	Summary	46

---

<b>4</b>	<b>Lecture 4: Irreducible Spherical Tensors</b>	<b>47</b>
4.1	Cartesian, Spherical and Irreducible Tensors	48
4.2	Rotational Properties of Irreducible Spherical Tensors	53
4.3	Rotation Operators and Euler Angles	54
4.4	Wigner Rotation Matrices	56
	Summary	58
	References	58

---

<b>5</b>	<b>Lecture 5: Perturbation Methods</b>	<b>59</b>
5.1	Perturbation Theory	60
5.2	Average Hamiltonian Theory	63
5.3	Interaction Frame Transformations	66
5.4	Hermiticity of Combinations of Hermitian Operators	67
	Summary	68
	References	69

---

<b>6</b>	<b>Lecture 6: The Spin Hamiltonian</b>	<b>70</b>
6.1	A General Form for the Spin Hamiltonian	71
6.2	The Zeeman Hamiltonian	73
6.3	The Secular Approximation	75
6.4	The Chemical Shift Hamiltonian	76
6.5	The Dipolar Coupling Hamiltonian	79
6.6	The Indirect Coupling Hamiltonian	81
6.7	The Quadrupolar Coupling Hamiltonian	83
6.8	Motional Averaging in Isotropic Liquids	85
	Summary	86

---

<b>7</b>	<b>Lecture 7: The Radiofrequency Hamiltonian and the Rotating Frame</b>	<b>87</b>
7.1	The Radiofrequency Field Hamiltonian	88
7.2	The Rotating Frame	90
7.3	On-resonance and Off-resonance Fields	92
7.4	Bloch–Siegert Shift	94
	Summary	96
	References	96

---

<b>8</b>	<b>Lecture 8: The Dynamics of an Isolated Spin-1/2</b>	<b>97</b>
8.1	The Dynamics of an Isolated Spin-1/2 Under the Influence of the Zeeman Hamiltonian	98
8.2	The Dynamics of an Isolated Spin-1/2 Under the Influence of a Radiofrequency Pulse	101
	Summary	104

---

<b>9</b>	<b>Lecture 9: The Density Operator</b>	<b>105</b>
9.1	The Density Operator	106
9.2	The Density Matrix	108
9.3	The Density Operator in Terms of Spin Angular Momentum Operators	109
9.4	Populations and Coherences	110
9.5	The Liouville–von Neumann equation	114
	Summary	117

---

<b>10</b>	<b>Lecture 10: The Dynamics of a Single Spin-1/2 Ensemble</b>	<b>118</b>
10.1	Interaction Hamiltonians and Pulse Sequences	119
10.2	The Equilibrium Density Operator for a Single Spin-1/2 Ensemble	119
10.3	The Dynamics of a Single Spin-1/2 Ensemble Under the Influence of a Radiofrequency Pulse	122

---

10.4	The Dynamics of a Single Spin-1/2 Ensemble Under the Influence of the Spin Hamiltonian	125
	Summary	126

---

<b>11</b>	<b>Lecture 11: The Dynamics of an Ensemble of Coupled Spin-1/2 Pairs</b>	<b>127</b>
11.1	The Quantum Description of an Isolated Spin-1/2 Pair	128
11.2	The Density Operator for an Ensemble of Spin-1/2 Pairs	132
11.3	The Equilibrium Density Operator for an Ensemble of Spin-1/2 Pairs	136
11.4	The Dynamics of an Ensemble of Spin-1/2 Pairs Under the Influence of a Radiofrequency Pulse	137
11.5	The Dynamics of an Ensemble of Spin-1/2 Pairs Under the Influence of the Spin Hamiltonian	139
	Summary	142

---

<b>12</b>	<b>Lecture 12: A Relaxation Theory of Nuclear Spin States</b>	<b>143</b>
12.1	Nuclear Spin Relaxation	144
12.2	A Phenomenological Approach to Spin Relaxation	144
12.3	Relaxation Master Equation	146
12.4	The Correlation Time	149
12.5	Justification of Assumptions	150
12.6	The Total Relaxation Superoperator	152
12.7	The Relaxation Superoperator for the Dipolar Mechanism	157
12.8	The Dipolar Contribution to $T_1$ and $T_2$ Relaxation Decay Time Constants	158
	Summary	161
	References	162
